

1. Write a program to build React app having a button which increase count by 1 while clicking it
2. Create a program to build React app having buttons to increment and decrement the number by clicking that respective button. Also, increment of the number should be performed only if number is less than 10 and decrement of the number should be performed if number is greater than 0.
3. Write a program to build React app having a button which changes image by clicking it.
4. Write React component having a button and image. By clicking on button, image changes randomly from a given array of images.
5. Write a program to build React app to perform the tasks as asked below.
 - Add three buttons “Change Text”, “Change Color”, “Hide/Show”.
 - Add heading “LJ University” in red color(initial) and also add “React Js Hooks” text in h2 tag.
 - By clicking on “Change text” button text should be changed to “Welcome students” and vice versa.
 - By clicking on “Change Color” button change color of text to “blue” and vice versa. **This color change should be performed while double clicking on the button.**
 - Initially button text should be “Hide”. While clicking on it the button text should be changed to “Show” and text “React Js Hooks” will not be shown.
6. Create a React component that manages multiple form input fields using a single state object and displays the values in real-time
7. Write a react component for todo list.
 - Add 1 input field and button and by clicking on button display entered task on the same page.

- **Also, add delete button with each added task to delete the task.**
